

TECHNIC

We work on construction zones for both already built buildings and continuing constructions. As we are cladding systems manufacturers and installers, our team acts on the exterior sides of the buildings at any height.

Workers should be familiar with tools and steel products to be used in the projects such as drillers, screwers, cutters, measurement tools. Each of them will be categorized and employed as "**ground workers - helpers**" to prepare the panels/materials, and "**installers**" on the platforms/self-climbers to assemble the system of panels and materials over the facade of buildings. TECHNIC uses Mechanical Fiscal Systems materials. All local workers will be mentored by skilled company personnel. Safety Training provided locally.

We are hiring **8-10 local skilled workers**, full-time from February 2019 to August 2019 for the **Fenwick Tower Project** the system to install is pictured below. 12 hour shifts to include working in all weather conditions. We welcome all Skilled Workers to apply.

If you would like to be part of this project located in Halifax starting February 2019, send your resume to carrie.wall@jobjunction.ca by Tuesday, January 15, 2019.
